PREFACE

This Joint Mission Coverage Index (JMCI) furnishes a listing of intelligence targets covered by Mission G 3016. Items in the listing are arranged by (1) country, (2) WAC area within the country, and (3) coordinates reading from south to north and from east to west. An explanation of codes used in presenting the information is contained in the appendix.

For convenience of the user, a subject index to the intelligence targets has been included following the listing. Targets in the subject index are listed (1) by category, and (2) alphabetically by place name within the category.

Mission 3016 was accomplished on 11 December 1960 and covered portions of all six provinces of Cuba (see accompanying Flight Line Trace). The Minas del Frio Army Camp was noted for the first time on good quality aerial photography. Among the other major targets covered were the Havana complex, Santiago de Cuba, Santa Clara, the Managua Military Reservation, and Mariel Naval Base.

APPENDIX**EXPLANATION OF COLUMN HEADINGS****AND PHOTO REFERENCES**

Column headings used in the listing are as follows (reading from left to right):

City, Installation -- This column contains the name of the city or town nearest the installation, followed by the name of the installation. If the name of the installation is not known, it is titled according to its function. The city and installation name is followed by a capsule description, where appropriate.

Coordinates -- Coordinates are given to the nearest minute. When the subject installation covers a wide area, coordinates are given for the approximate center of the installation.

WAC -- This column provides the World Aeronautical Chart number for the area in which the subject installation lies.

Target Numbers -- The Target Numbers column is divided into two subcolumns. The first subcolumn lists, when known, the BE installation number assigned to the target. The second column lists the installation number assigned by PIC. Installation numbers, when used to reference an item, should be prefixed by the appropriate WAC number, since installation numbers are repeated from WAC to WAC. For example, there is a PIC target numbered 0586-1 and a PIC target numbered 0585-1. In each instance, the PIC installation is 1, but the installations appear on different WACs.

TOP SECRET

[REDACTED] Release 2001/07/12 : CIA-RDP89B00551R001000300011-5

PIC/JMCI-5/61

A photo reference is provided for every item in the JMCI, and appears as the last line of a given item. This line is best explained by using an example:

R/375, 380 -- L/376, 381 SC

R/375, 380 designates photographic frames from the right half of the split format which cover the target, while L/376, 381 designates frames from the left half of the split format which cover the target.

SC designates cloud conditions as they exist over the target. The code for cloud conditions is as follows:

C	Clear
SC	Scattered Clouds
HC	Heavy Clouds
O	Overcast
H	Haze (includes smoke, blowing snow and dust)
CS	Cloud Shadow (cloud shadows cast on ground reducing interpretability)
